# Manage Hudson

[Configure System](#)

Configure global settings and paths.

[Reload Configuration from Disk](#)

Discard all the loaded data in memory and reload everything from file system. Useful when you modified config files directly on disk.

[Manage Plugins](#)

Add, remove, disable or enable plugins that can extend the functionality of Hudson.

[System Information](#)

Displays various environmental information to assist trouble-shooting.

[System Log](#)

System log captures output from `java.util.logging` output related to Hudson.

[Load Statistics](#)

Check your resource utilization and see if you need more computers for your builds.

[Hudson CLI](#)

Access/manage Hudson from your shell, or from your script.

[Script Console](#)

Executes arbitrary script for administration/trouble-shooting/diagnostics.

[Manage Nodes](#)

Add, remove, control and monitor the various nodes that Hudson runs jobs on.

[Get Support Subscription](#)

Commercial support subscription available from Sun Microsystems.

[Prepare for Shutdown](#)

Stops executing new builds, so that the system can be eventually shut down safely.

## Build Queue

No builds in the queue.

## Build Executor Status

#	Status
